

## **Essential Python for Data Analyst Live Class**

## เนื้อหาสำคัญที่จะเรียนใน Class นี้:

- · Loop over list/dictionary
- Try except block
- csv, json
- · Context Manager
- · Requests, API
- Basic web scraping
- Intro to numpy, pandas, sklearn

-ใช้ Google Colab เหมือนคลาสก่อนหน้า

## HTTP response status codes

HTTP response status codes indicate whether a specific <u>HTTP</u> request has been successfully completed. Responses are grouped in five classes:

- 1. Informational responses ( 100 199 )
- 2. Successful responses ( 200 299 )
- 3. Redirection messages (300 399)
- 4. Client error responses (400 499)
- 5. Server error responses (500 599)

The status codes listed below are defined by RFC 9110 2.

**Note:** If you receive a response that is not in <u>this list</u>, it is a non-standard response, possibly custom to the server's software.

-ใน Excel จะมี Flash Fill (CTRL + E) ซึ่งมีประโยชน์มาก ทำให้ประหยัดเวลาได้เยอะ (Google Sheets ทำไม่ได้)

## Homework

```
# HW 01: Find public API and create a dataframe
import pandas as pd
import requests as re

url = "https://animechan.vercel.app/api/quotes/anime?title=naruto"

headers = {"Accept-Language": "en-US"}

response = re.get(url, headers = headers)

data_json = response.json()
df = pd.DataFrame(data_json, columns = ['anime', 'character', 'quote'])
```

df.to\_csv("Naruto\_Quotes.csv")

```
# HW 02: Find 3 models in sklearn and test them with small dataset
